1. Document Purpose

The purpose of this document is to provide a detailed description of the interface messaging requirements to support Complex Alternate Level of Care (ALC) integration with the Wait Time Information System (WTIS). This document will identify the supported HL7 trigger events and outline how the WTIS will interpret and process data elements sent in each unique message.

2. Intended Audience

This document is intended for use by a technical audience. Please ensure IT staff involved in WTIS implementation and integration activities at your facility are provided with the most recent version of this document.

3. References and Related Documents

Several key documents are available on the ATC Information Site to provide additional guidance and information related to Complex ALC integration.

- [WTIS Complex HL7 Summary Data Mapping Tool](#)
- [ALC Wait Time Data Elements and System Labels](#)

4. Highlights of What's New in Version 3.0

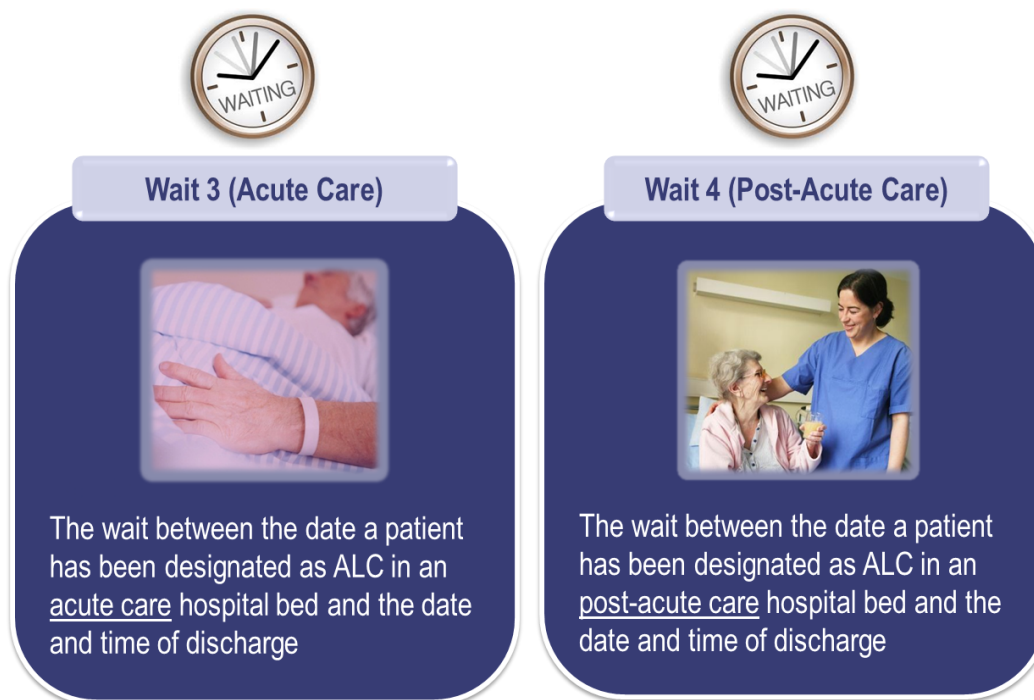

The Complex ALC HL7 Specification has been modified to meet the requirements for the WTIS to capture new and updated data elements. Highlights of the modifications are as follows:

1. To allow sites to be able to perform Site to Site transfers, New Site Number, Transfer Date and New Visit Number fields have been added.
 - All three fields (New Site Number, Transfer Date and New Visit Number) must be provided when an ALC Waitlist Entry (WLE) is transferred to a new site within the same facility.
 - The New Site Number is submitted in the PV1 segment (PV1.37) of the ORM^O01 message type.
 - The Transfer Date is submitted in the PV1 segment (PV1.45) of the ORM^O01 message type.
 - The New Visit Number is submitted in the PV1 segment (PV1.50) of the ORM^O01 message type.
2. A **Most Appropriate Discharge Destination Determination Date** field has been added.
 - The Most Appropriate Discharge Destination Date is submitted in the ZWA segment (ZWA.9) of the ORM^O01 message type.
3. Additional **ALC Discharge Destination and Most Appropriate Discharge Destination** validations have been added.
 - Submission of the ALC Discharge Destination is now mandatory.
 - Submission of ALC Most Appropriate Discharge Destination is now mandatory.
 - Previously, entries submitted without an ALC Discharge Destination or Most Appropriate Discharge Destination were automatically assigned a destination of To Be Determined (TBD). To allow hospitals to explicitly indicate when the ALC Discharge Destination or Most Appropriate Discharge Destination is not known, a new value has been added to both the ALC Discharge Destination and Most Appropriate Discharge Destination fields:
 - Unknown
4. New **Specialized Needs and Supports** have been added.
 - Behavioural Requirements - 1:1 Support
 - Behavioural Requirements - Aggressive Behaviours
 - Behavioural Requirements - Sexualized Behaviours
 - Infection Control/Isolation Requirements - Out-break at Discharge Destination
 - Infection Control/Isolation Requirements - Out-break at Facility
 - Mental Health Requirements - Addictions

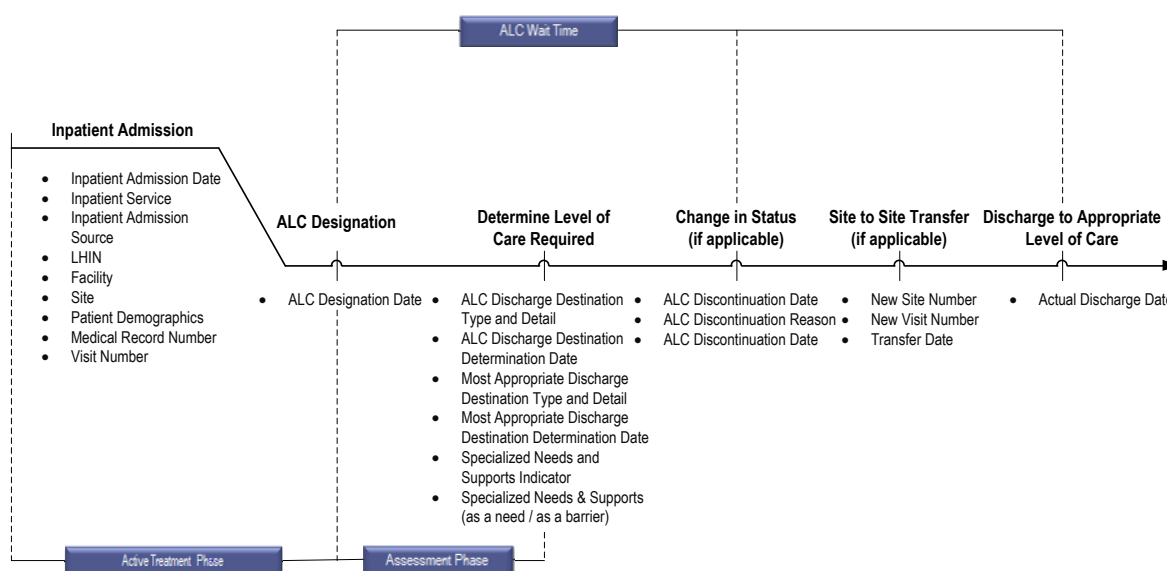

- Mental Health Requirements - Concurrent Disorders
 - Neurological Requirements - Acquired Brain Injury
 - Social Requirements - Financial constraints
 - Social Requirements - Housing/Homelessness
 - Social Requirements - Lack of social support
 - Social Requirements - Legal concerns
5. Some **Specialized Needs and Supports** have had their names updated. Their coded values remain unchanged.
- Behavioural Requirements changed to Behavioural Requirements - Unspecified
 - Infection Control/Isolation Requirements changed to Infection Control/Isolation Requirements - Isolation
 - Mental Health Requirements changed to Mental Health Requirements – Unspecified
 - Neurological Requirements changed to Neurological Requirements - Unspecified
 - Social Requirements changed to Social Requirements - Unspecified
6. Additional **Inpatient Service** validation rules have been added when updating inpatient services. These rule align with existing guidance. An inpatient service can now only be updated from one acute inpatient service to another acute inpatient service. E.g. NS to SU.

5. WTIS Application Integration Overview

The WTIS captures Wait 3 and Wait 4 ALC wait times on ALC patients:

The following diagram outlines all of the ALC data elements captured in the WTIS:

For ALC, there are two levels of integration: The integration level a facility utilizes is determined in partnership with ATC and each facility. The main criteria associated with determining a facility's integration level is based on the readiness of a facility to implement both the required technical and process changes associated with each level of integration.

Level of Integration	Waitlist entry is created. . .	Waitlist entry is modified. . .	Waitlist entry is closed. . .
Basic	via manual input into the WTIS website (GUI)	via manual input into the WTIS website (GUI)	via manual input into the WTIS website (GUI)
Complex	via interface message directly from facility source system/interface	via interface message directly from facility source system/interface	via interface message directly from facility source system/interface

6. Minimum Facility Requirements

The following are the minimum technical requirements that must be met to determine if a facility is ready to implement Complex ALC integration.

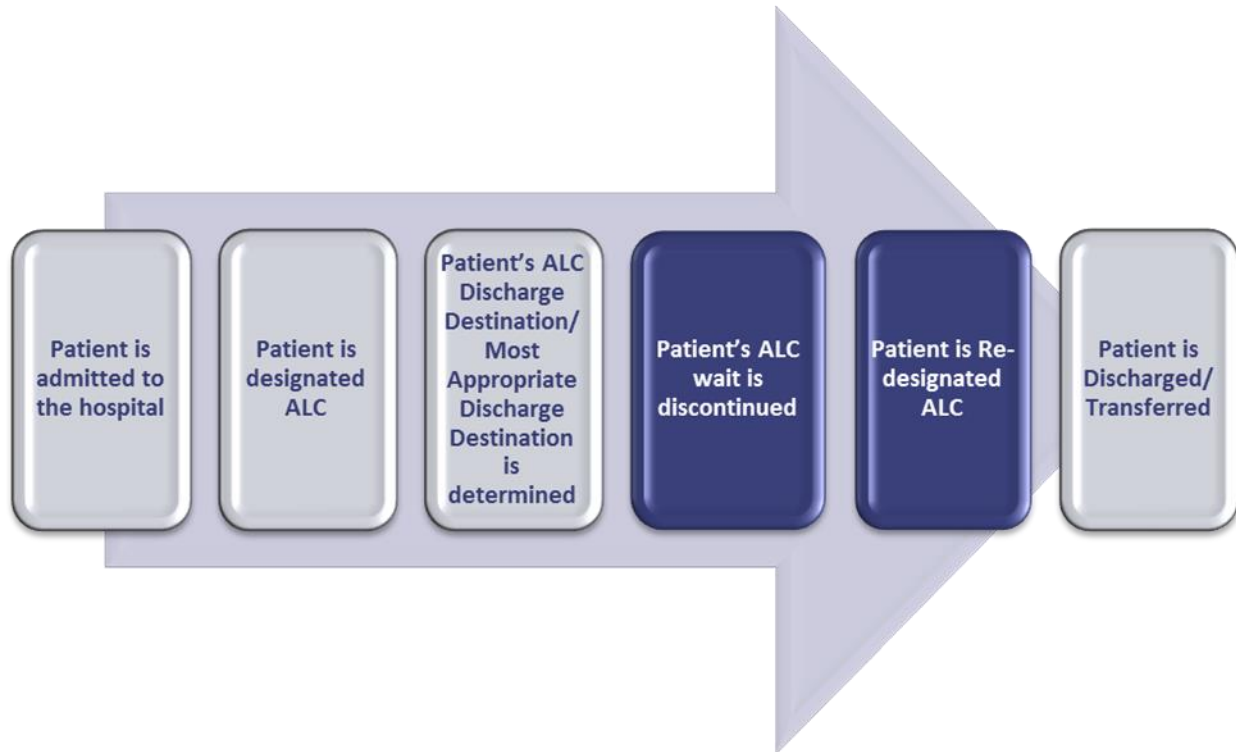

- Facilities must be able to send the following HL7 messages for each ALC waitlist entry:
 - ORM^O01 – Order message to **open** an ALC waitlist entry
 - ORM^O01 – Order message to **update** an ALC waitlist entry
 - ADT^A03 – Discharge message to **close** an ALC waitlist entry
- Facilities will utilize the HL7 ORM^O01 order message to open and update ALC waitlist entries.
- Facilities will utilize the HL7 ORM^O01 order message to discontinue an ALC waitlist entry due to the following discontinuation reasons:
 - Change in Destination Invalidates ALC Designation
 - Change in Medical Status
 - Data Entry Error
- Facilities will utilize the HL7 ADT^A03 discharge message to close an ALC waitlist entry due to the following discontinuation reasons:
 - Death
 - Discharge Against Medical Advice
 - Transfer to Acute Care
 - Unplanned Repatriation
- Facilities must be able to send unique Patient Identifiers (such as MRN) in their order and discharge messages.
- Facilities must be able to provide a unique patient Visit Number (e.g., an Encounter ID) for each individual ALC waitlist entry. This Visit Number will be used to identify the waitlist entry throughout its lifespan.
- Facilities will filter their source systems to only send HL7 messages associated with ALC patients to the WTIS.
- Facilities will be required to distinguish between a closed waitlist entry due to a patient discharge and a discontinuation/cancellation in a patient's wait. A discharge permanently closes a waitlist in the system. However, if a patient's wait is discontinued due to a Change in Medical Status, the ALC waitlist entry closes, but can be opened if re-designation occurs.
- Facilities should ensure that the following date rules are adhered to:
 - All dates must be less than or equal to the current date and greater than or equal to January 1, 1850
 - The Inpatient Admission Date must be greater than or equal to the patient's date of birth
 - ALC Designation Date must be greater than or equal to Inpatient Admission Date

- ALC Discharge Destination Determination Date must be greater than or equal to ALC Designation Date or most recent ALC Re-designation Date (if applicable)
- ALC Discharge Destination Determination Date cannot be less than the previously submitted ALC Discharge Destination Determination Date (if applicable)
- When the ALC Discharge Destination Determination Date changes an update must be made to the Discharge Destination
- Most Appropriate Discharge Destination Determination Date must be greater than or equal to ALC Designation Date OR most recent ALC re-designation date (if applicable)
- Most Appropriate Discharge Destination Determination Date cannot be less than the previously submitted Most Appropriate Discharge Destination Determination Date (if applicable)
- When the Most Appropriate Discharge Destination Determination Date changes an update must be made to the Most Appropriate Discharge Destination
- ALC Discontinuation Date must be greater than or equal to ALC Designation Date
- ALC Discontinuation Date must be greater than or equal to ALC Discharge Destination Determination Date and the Most Appropriate Discharge Destination Determination Date
- ALC Re-designation Date must be greater than or equal to the associated ALC Discontinuation Date
- Actual Discharge Date must be greater than or equal to ALC Designation Date
- Actual Discharge Date must be greater than or equal to ALC Discharge Destination Determination Date and the Most Appropriate Discharge Destination Determination Date
- Facilities must be able to send Specialized Needs and Supports Indicator (i.e., indication whether the patient requires specialized needs/supports at the ALC Discharge Destination).
- Facilities must be able to send Specialized Needs and Supports and indicate if they are a Need or a Barrier.
- Facilities must be able to send Most Appropriate Discharge Destination.
- Facilities must be able to send Most Appropriate Discharge Destination Determination Date.
- Facilities must support the receipt and interpretation of HL7 positive and/or negative acknowledgment messages.
- Facilities must be able to differentiate between an ALC Create and an ALC Update waitlist ORM^O01 message by including the appropriate ORC segment code combination.
- Data element mapping is not supported by WTIS and must be performed (if applicable) by facilities prior to sending the information to the WTIS.
- Facilities must be able to send updates for:
 - Inpatient Admission Date

- Inpatient Service
- Inpatient Admission Source
- ALC Discharge Destination Type & Detail
- ALC Discharge Destination Determination Date
- Most Appropriate Discharge Destination Type & Detail
- Most Appropriate Discharge Destination Determination Date
- Specialized Needs and Supports Indicator
- Specialized Needs and Supports (as a need/as a barrier)
- Facilities must be able to retransmit failed messages to the WTIS.
- Facilities must be able to send all ORM data fields within one message, if available.
- Multi-Site ALC Facilities as part of Site to Site transfer events;
 - Must be able to send New Site Number.
 - Must be able to send Transfer Date.
 - Must be able to send New Visit Number.

7. Clinical Event Overview

The diagram below is a visual representation depicting possible clinical events and the associated waitlist entry.

The following table lists the clinical events displayed above with the corresponding message type and message use case from a WTIS perspective:

Clinical event	Message	Message Use Case
Patient is admitted to the hospital	n/a	n/a
Patient is designated ALC	ORM^O01	Open ALC Waitlist Entry (New)
ALC Discharge Destination/Most Appropriate Discharge Destination is determined	ORM^O01	Update ALC Waitlist Entry
Change in ALC Discharge Destination/Most Appropriate Discharge Destination	ORM^O01	Update ALC Waitlist Entry

Patient ALC waitlist is discontinued due to: <ul style="list-style-type: none"> Change in Destination Invalidates ALC Designation Change in Medical Status Data Entry Error 	ORM^O01	Update ALC Waitlist Entry
Patient is Re-designated ALC	ORM^O01	Open ALC Waitlist Entry (Re-Designate)
Patient ALC waitlist is discontinued due to: <ul style="list-style-type: none"> Discharge Against Medical Advice Death Transfer to Acute Care Unplanned Repatriation 	ADT^A03	Close ALC Waitlist Entry
Patient is Discharged to appropriate ALC Discharge Destination	ADT^A03	Close ALC Waitlist Entry
Patient is transferred to another site within the same facility, moving from same bed type to same bed type	ORM^O01	Update ALC Waitlist Entry

The data elements required and the values of the data elements sent in each message type vary depending on the use case. The message definition by use case is provided in [Section 9: Message Use Case Details](#).

Section	Message	Message Use Case
9.1	ORM^O01	Open ALC Waitlist Entry
9.2	ORM^O01	Update ALC Waitlist Entry
9.3	ADT^A03	Close ALC Waitlist Entry

For further details and scenarios demonstrating HL7 messages and the resulting state of the corresponding WTIS waitlist entry, please see [Appendix A – ALC Scenarios for the WTIS](#).

8. WTIS HL7 Specification – WTIS Field and Component Requirements

8.1 HL7 Message Structure

The information in this section is provided for reference only. The HL7 Standard should be considered the authoritative reference.

8.2 Messages

A message is the atomic unit of data transferred between systems. Each message has a message type that defines its purpose.

8.3 Date/Time Data

A date/time field may contain a date, or a date and time, according to the level of precision specified in the message definition.

Dates are always represented as YYYYMMDD where:

- YYYY is the year,
- MM is the month, and
- DD is the day.

For example, December 20, 1951 is represented as 19511220.

Time is always represented as HHMMSS where:

- HH is hours in 24-hour format,
- MM is minutes, and
- SS is the seconds.

For example, 12:30 p.m. on December 20, 1951 would be represented as 19511220123000.

All ALC dates must be valid dates, not future-dated (they must be equal or less than the current date) and they must be after January 1, 1850.

8.4 Field Optionality

This specification defines the optionality of segments, fields, field components, and field subcomponents in the Message Specification Detail as described in the two tables below. The first table describes optionality as defined by the HL7 standard, while the second describes optionality as defined by the WTIS HL7 standard.

HL7		
Value	Description	Definition
R	Required	<p>A sending application shall populate all “R” elements with a non-empty value. The receiving application shall process the information conveyed by required elements.</p> <p>A receiving application must not raise an error due to the presence of a required element, but may raise an error due to the absence of a required element.</p>
O	Optional	<p>This code indicates that the usage for this element has not yet been defined. A usage of ‘Optional’ may not be used in ‘implementation’ profiles (non-optionality profiles).</p> <p>Conformance may not be tested on an Optional field. Narrower profiles may be defined based on this profile, and may assign any usage code to the element.</p>
C	Conditional	<p>This usage has an associated condition predicate.</p> <p>If the predicate is satisfied:</p> <p>A sending application must always send the element. A receiving application must process the element. It may raise an error if the element is not present.</p> <p>If the predicate is not satisfied:</p> <p>A sending application must not send the element. A receiving application must not raise an error if the condition predicate is false and the element is not present, though it may raise an error if the element is present.</p>

WTIS		
Value	Description	Definition
M	Mandatory	A field that is indicated as Mandatory (“M”) is required by the WTIS.
MNU	Mandatory Not Used	A field that is indicated as Mandatory Not Used (“MNU”) is required by the HL7 Standard but not by the WTIS. As such, while a value is required to be sent in your message, the WTIS will not use the value for waitlist entry creation. In most cases a recommended value is provided in the Message Specification Detail.

Notes:

- Implementers are advised to review the notes associated with a given element to fully understand how and when the element must be populated.
- The optionality of a given element or segment may vary from one message, event, or Order Control Code to another. Implementers are encouraged to study the message definitions carefully. To improve readability and highlight significant information, this specification has been written so as to minimize redundant information in the message profiles.

8.5 Character Set Support

- The WTIS does not support the message delimiters identified in the HL7 Standard to switch to alternative character sets within a message.
- The WTIS does not support the message delimiters as part of the data value contained in the HL7 message.

8.6 Message Encoding Rules

The WTIS supports HL7 ER7 Vertical Bar (Pipe) Encoding.

Segments

A message is comprised of a group of segments in a defined sequence. Segments are logical groupings of data fields. Each segment has a name and a three-character identifier. A segment may be “mandatory,” “optional,” and some may be repeated in certain contexts. In message-level profiles, optional segments or groups of optional segments are indicated by square brackets. Repeatable segments, or groups of repeatable segments, are surrounded by curly braces. Each segment must be of a valid type and must appear in the expected sequence. Segments must also be contextually correct (e.g., a non-repeating segment must appear only once within a message) according to the message profile.

Fields

Fields for use within HL7 segments are defined by HL7. When fields are transmitted, they are sent as character strings. The allowable information that may be contained in each field is constrained in the message profile by specifying a data type, a maximum number of characters that a single instance of the field may occupy, and an optionality indicator. Some fields may be further constrained by specifying a table of allowed values that may appear in the field.

Field Components and Subcomponents

Some data types are composed of component fields, which in turn may be composed of subcomponent fields. In the message profile, each component and subcomponent field is assigned a data type, a maximum number of characters that a single instance of the field may occupy, an optionality indicator and, when applicable, a table of allowed values that the field may contain.

8.7 Standard Data Values

The WTIS supports standard data values as defined in the HL7 Standard, version 2.4.

8.8 Message Delimiters

Level	Delimiter	Structure	Purpose
1	\r	Segment	The segment terminator is always a carriage return (end of record).
2		Field	Separates two adjacent data fields within a segment. It also separates the segment ID from the first data field in each segment.
3	~	Repetition	Separates multiple occurrences of a field, where allowed.
4	^	Component	Separates adjacent components of data fields, where allowed.
5	&	Subcomponent	Separates adjacent subcomponents of data fields, where allowed.
6	\	Escape	Escape character for use with any field represented by an ST, TX, or FT data type to prevent the character that follows it from being recognized as a delimiter.

Notes:

- In order to prevent SQL Injection attacks, the sequence of two consecutive hyphens (“--”) is illegal inside any HL7 field/component/subcomponent that corresponds to a WTIS field.
- WTIS uses the following HL7 delimiters: ([],[^],[~],[\],[&]) and [%] and [--]. These characters should not be used except as HL7 delimiters.

8.9 MLLP

All outbound messages sent to the WTIS must be transported through MLLP.

Block Characters

These parameters are special characters that must enclose HL7 messages received or sent through MLLP adapters.

These characters form a block in the following format:

<SB>DDD<EB><CR>

Where:

- DDD stands for the message data,
- <SB> is the start-block character,
- <EB> is the end-block character, and
- <CR> is the carriage return.

Parameter	Value (Hex)	Use
<CR>	0d	Carriage return byte value (in hex) used for the carriage return (the second byte wrapper after the end byte).
<SB>	0b	Start-Block character byte value used for the start byte (message header wrapper).
<EB>	1c	End-Block character byte value used for the end byte (message trailer wrapper).

8.10 Acknowledgement Messages

The WTIS will send HL7 acknowledgement messages (positive and/or negative) back to the sending application.

The acknowledgement message has the following structure:

Segment	Description	Section
MSH	Message Header	10
MSA	Message Acknowledgement	10
[ERR]	Error	10

Indication of the success or failure of the transaction is provided in the MSA segment. AA represents successful completion, AE represents an application error, and AR is set by the infrastructure for invalid transactions or transactions that cannot make it through to the receiving application.

The fields in the segments listed above are described in detail in Section 10: Message Specification Detail.

8.11 Network Model

The WTIS interface provides direct point-to-point communication between the external system and the WTIS. External systems always initiate business transactions with the WTIS. The WTIS does not send unsolicited messages to external systems.

8.12 Persistence of Information

When the WTIS receives a waitlist entry amendment to update an existing waitlist entry in the WTIS, it will merge the existing waitlist entry information with the information in the message. If all applicable business rules and data integrity checks succeed, the amended waitlist entry will be recorded in the WTIS.

8.13 Acknowledgement Mode

The WTIS supports the HL7 immediate, original acknowledgement mode.

8.14 Support for Special HL7 Protocols

This section identifies the WTIS support for a number of special protocols described in the HL7 Standard.

HL7 Batch Protocol

The WTIS does not support the HL7 Batch Protocol.

HL7 Sequence Protocol

The WTIS does not support the HL7 sequence protocol.

Message Continuation Protocol

The WTIS does not support the receipt of messages that have been split using the message continuation protocol.

Segment Continuation Protocol

The WTIS does not support the segment continuation protocol.

8.15 Format Rules for Entity Identifiers

Formatting rules for entity identifiers, as well as all ALC supported data elements, are included in Section 10: Message Specification Detail. Facilities must adhere to all formatting rules given in that section.

8.16 Event Flows

It is expected that ALC messages will be sent in the following sequence for any particular visit number:

- ORM^O01 – Open ALC Waitlist Entry
- ORM^O01 – Update ALC Waitlist Entry
- ADT^A03 – Close ALC Waitlist Entry

Details for the clinical workflow and mandatory field requirements are provided in Section 7 Clinical Event Overview.

9. Message Use Case Details

- The details that follow are organized by message use case.
- Not all fields contained within the HL7 Standard are listed in this specification. You may choose to include fields not used by the WTIS in your interface, or you may choose to strip off any trailing delimiters. Please be aware that the existence of trailing field delimiters in the ZWA segment will cause message failure so these should be removed before sending the message to the WTIS.

9.1 Open ALC Waitlist Entry - Use Case

When a patient is designated as ALC, an ORM^O01 (Create/Open) order message is sent to create an ALC waitlist entry. The ORM^O01 structure is:

MSH | PID | PV1 | ORC | ZWA

***Please note:** the ORC segment determines the type (Create/Open or Update) of ORM^O01 message.*

Upon receipt of an ORM^O01 create message, WTIS determines the action to perform; either to create a new ALC waitlist entry or to re-designate an existing ALC waitlist entry.

Open ALC Waitlist Entry – New

If an ALC waitlist entry, matching the criteria for re-designation is not found in the WTIS, a new ALC waitlist entry will be created for the patient

Open ALC Waitlist Entry – Re-Designate

An ALC waitlist entry is re-opened if the patient is re-designated ALC. The criteria to re-open the ALC waitlist entry due to re-designation are as follows:

- The existing waitlist entry must have an ALC Discontinuation Reason of Change in Medical Status
- The ALC Re-designation Date must fall within 40 business days following the ALC Discontinuation Date
- The Re-designate message must contain the same Visit Number as the discontinued waitlist entry

The data elements sent when re-designating a patient are identical to those sent in the creation of a new ALC waitlist entry. In the event a matching ALC waitlist entry is not found, a new ALC waitlist entry is created in the system.

Open ALC Waitlist Entry Sample Messages

Example 1 - Open ALC waitlist entry ORM^O01 message for a patient being designated/re-designated ALC when the expected ALC Discharge Destination is Unknown. The Most Appropriate Discharge Destination and Most Appropriate Discharge Destination Date information are provided:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^CC|||||1||||VN12345001|||||20140101|||||
ORC|NW|||IP
ZWA|20140101|UNK|20140101|||N|HME.CCAC|20140101
```

Example 2 - Open ALC waitlist entry ORM^O01 message for a patient designated with a known ALC Discharge Destination and a single Specialized Need and Support identified as a Need. The Most Appropriate Discharge Destination and Most Appropriate Discharge Destination Date are provided:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^CC|||||1||||VN12345002|||||20140101|||||
ORC|NW|||IP
ZWA|20140101|HME.CCAC|20140101|BA^N||Y|HME.CCAC|20140101
```

Example 3 - Open ALC waitlist entry ORM^O01 message for a patient designated ALC, with a known ALC Discharge Destination and multiple Specialized Needs and Supports identified as Need and Barrier. The Most Appropriate Discharge Destination and Most Appropriate Discharge Destination Date information are provided:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^CC|||||1||||VN12345002|||||20140101|||||
ORC|NW|||IP
ZWA|20140101|HME.CCAC|20140101|BA^N~DL^B||Y|HME.CCAC|20140101
```

9.2 Update ALC Waitlist Entry - Use Case

Once an ALC waitlist entry has been created in the system by an Open ALC waitlist entry ORM^O01 (Create/Open) message, changes to the status of that ALC waitlist entry are made via an ORM^O01 (Update) order message. The ORM^O01 structure is:

MSH | PID | PV1 | ORC | ZWA

Please note: the ORC segment determines the type (Create/Open or Update) of ORM^O01 message.

Implementation Notes:

- (a) When updating an ALC waitlist entry, values in the ZWA segment must be re-provided, even if they have not changed.
- (b) An ALC waitlist entry can be closed while performing an ALC Waitlist Entry Update; this involves a discontinuation of the ALC waitlist entry.

Update ALC Waitlist Entry Sample Messages

Example 1 - Update ALC Waitlist Entry ORM^O01 message to update an ALC waitlist entry with an ALC Discharge Destination, Most Appropriate Discharge Destination and Most Appropriate Discharge Destination Date and a single Specialized Need and Support identified as Need:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^^^CC|||||1||||VN12345002|||||||||||||20140101|||||
ORC|RO|||SC
ZWA|20140101|HME.CCAC|20140102|BA^N|||Y|HME.CCAC|20140102
```

Example 2 - Update ALC Waitlist Entry ORM^O01 message to update an ALC waitlist entry with an ALC Discharge Destination, Most Appropriate Discharge Destination and Most Appropriate Discharge Destination Date and additional Specialized Needs and Supports identified as Need or Barrier:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^^^CC|||||1||||VN12345002|||||||||||||20140101|||||
ORC|RO|||SC
ZWA|20140101|HME.CCAC|20140102|BA^N~MV^B~WC^B|||Y|HME.CCAC|20140102
```

Example 3 - Update ALC Waitlist Entry ORM^O01 message performing site to site transfer with New Site Number, New Visit Number and Transfer Date information and additional Specialized Needs and Supports identified as Need or Barrier:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^^^CC|||||1||||VN12345005|||||||||||||9998|||||20140105|||||VN12345099||
ORC|RO|||SC
ZWA|20140101|HME.CCAC|20140101|BA^N~MV^B~WC^B|||Y|HME.CCAC|20140101
```

Example 4 - Update ALC Waitlist Entry ORM^O01 message discontinuing an ALC waitlist entry due to an ALC Discontinuation Reason of “Change in Medical Status”:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ORM^O01|83754|D^T|2.4
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M

9.3 Close ALC Waitlist Entry - Use Case

When a patient is discharged from the facility, an ADT^A03 discharge message is sent to close the ALC waitlist entry. The ADT^A03 structure is:

MSH | EVN | PID | PV1

Close ALC Waitlist Entry Sample Messages

Example 1 - Close ALC Waitlist Entry ADT^A03 message due to an ALC Discontinuation Reason of “Patient Death”:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ADT^A03|00001|D^T|2.4
EVN||20140122|
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^CC|||||1||||VN12345003|||||||05|||||20140101|20140102|||||
```

Example 2 - Close ALC Waitlist Entry ADT^A03 message when a patient is discharged:

```
MSH|^~\&|WTIS_REALTIME|9999|||201401150917||ADT^A03|00001|D^T|2.4
EVN||20140122|
PID|||MRN100001^^^9999^PI~4135680001^^^CANON^HC||Smith^John||19800101|M
PV1||N|^CC|||||1||||VN12345003|||||||01|||||20140101|20140122|||||
```

10. Message Specification Detail

10.1 Important Information

The following is a comprehensive listing of all segments and fields in messages supported by the WTIS for Complex ALC integration. Please leave all other fields blank.

- All components highlighted in **Bold** and Underlined within each field are **required**.
- In order to prevent SQL Injection attacks, the sequence of two consecutive hyphens (“--”) is illegal inside any HL7 field/component/subcomponent that corresponds to a WTIS field.
- WTIS uses the following HL7 delimiters: ([],[^],[~],[\],[&]). These characters should not be used except as delimiters. The following characters should not be used at all: [%] and [--]. For more information on HL7 delimiters, please refer to Section 8.8: Message Delimiters.
- Please ensure that all populated segment fields/components/subcomponents follow requirements defined within HL7 tables.
- Entry in the specification document refers to an ALC waitlist entry in the WTIS system.
- Not all fields contained within the HL7 Standard are listed in this specification. You may choose to include fields not used by the WTIS in your interface; as long as they conform to the HL7 Standard and have passed through Conformance Testing.
- Please ensure you strip off any trailing delimiters. Please be aware that the existence of trailing field delimiters in the ZWA segment (i.e. after ZWA.9) will cause message failure. These should be removed before sending the message to the WTIS.
- When updating an ALC waitlist entry, any data in the ZWA segment must always be included in ORM^O01 messages even if the data is not changing. This data always overwrites existing data in the WTIS.

10.2 Segment Translations

This section describes the fields in each segment. Any segment which is not detailed in a table in this document does not come across the interface.

For the WTIS column:

M	Mandatory	MNU	Mandatory Not Used
O	Optional	C	Conditional
Rep	Repeatable		

For the Data Type column:

AD	Address	PL	Person location
CD	Channel definition	PN	Person name
CE	Coded element	PPN	Performing person time stamp
CF	Coded element with formatted values	PT	Processing type
CK	Composite ID with check digit	QIP	Query input parameter list
CM	Composite	QSC	Query selection criteria
CN	Composite ID number and name	RCD	Row column definition
CNE	Coded with no exceptions	RI	Repeat interval
CP	Composite price	RP	Reference pointer
CQ	Composite quantity with units	SAD	Street Address
CWE	Coded with exceptions	SCV	Scheduling class value pair
CX	Extended composite ID with check digit	SI	Sequence ID
DLN	Driver's license number	SN	Structured numeric
DR	Date/time range	SRT	Sort order
DT	Date	ST	String
ED	Encapsulated data	TM	Time
EI	Entity identifier	TN	Telephone number
FC	Financial class	TQ	Timing/quantity
FN	Family name	TS	Time stamp
FT	Formatted text	TX	Text data
HD	Hierarchic designator	VH	Visiting hours
ID	Coded values for HL7 tables	VID	Version identifier
IS	Coded value for user-defined tables	XAD	Extended address
JCC	Job code/class	XCN	Extended composite ID number and name
MA	Multiplexed array	XON	Extended composite name & ID number for organizations
MO	Money	XPN	Extended person name
NA	Numeric array	XTN	Extended telecommunications number

10.3 MSH (Message Header)

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
0	Segment Name	3	R	M	ST	This is a mandatory field for ORM^O01 and ADT^A03. Value must be 'MSH'.
1	Field Separator	1	R	M	ST	This is a mandatory field for ORM^O01 and ADT^A03. Value must be ' '.
2	Encoding Characters	4	R	M	ST	This is a mandatory field for ORM^O01 and ADT^A03. Value must be '^~!&'
3	Sending Application	180	R	M	HD	This is a mandatory field for ORM^O01 and ADT^A03. Value must be: WTIS_REALTIME
4	Sending Facility	180	O	M	HD	This is a mandatory field for ORM^O01 and ADT^A03. Definition: This is the site identifier where the patient is designated ALC Components: <namespace ID (IS)> ^ <universal ID (ST)> ^ <universal ID type (ID)> Example: 4107^^
7	Date/Time of Message	26	R	M	TS	This is a mandatory field for ORM^O01 and ADT^A03. Accepted Format: <u>YYYYMMDDHHMM</u>

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
9	Message Type	13	R	M	CM	<p>This is a mandatory field for ORM^O01 and ADT^A03.</p> <p>Accepted Values:</p> <ul style="list-style-type: none"> - ORM^O01 - ADT^A03 <p>Components:</p> <p><u><Message Code (ID)> ^ <Trigger Event (ID)> ^</u> <u>< Message Structure (ID)></u></p> <p>Example:</p> <ol style="list-style-type: none"> 1. If sending an Open ALC Waitlist Entry or Update ALC Waitlist Entry order message the value in this field will be: ORM^O01. 2. If sending a Discharge ALC Patient message the value in this field will be: ADT^A03.
10	Message Control ID	20	R	MNU	ST	<p>This is a mandatory field for ORM^O01 and ADT^A03</p> <p>Definition:</p> <p>This field contains a number or other identifier that uniquely identifies the message from the sending application according to HL7 requirements. WTIS does not use this number for managing messages.</p> <p>Note:</p> <p>This identifier is returned with the acknowledgment message and can be used to identify specific messages that were sent.</p>
11	Processing ID	3	R	M	PT	<p>This is a mandatory field for ORM^O01 and ADT^A03</p> <p>Components:</p> <p><u><processing ID (ID)> ^ <processing mode (ID)></u></p> <p>Accepted Values:</p> <ol style="list-style-type: none"> 1. For Testing, value must be D^T 2. For Production, value must be P^T

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
12	Version ID	60	R	M	VID	<p>This is a mandatory field for ORM^O01 and ADT^A03.</p> <p>Components: <code><version ID (ID)>^<internationalization code (CE)>^<internal version Id (CE)></code></p> <p>Accepted Value: Value must be '2.4'</p>

10.4 EVN (Event)

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
0	Segment Name	3	R	M	ST	<p>This is a mandatory field for ADT^A03. Value must be 'EVN'</p>
2	Recorded Date/Time	26	R	MNU	ID	<p>This is a mandatory field for ADT^A03. Recorded Date/Time</p> <p>Accepted Format: <u>YYYYMMDD</u></p>

10.5 PID (Patient Identification)

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
0	Segment Name	3	R	M	ST	<p>This is a mandatory field for ORM^O01 and ADT^A03. Value must be 'PID'.</p>
3	Patient Identifier List	76	C	M	CX	<p>This is a mandatory field for ORM^O01 and ADT^A03 for the WTIS.</p> <p>A Patient Identifier is required. It is possible to send an HCN with no MRN.</p> <p>Two variables that are to be included in this field are: (1) MRN - Medical Record Number (2) HCN - Health Card Number</p>

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
						<p>The patient identifier must be alphanumeric, must not contain any non-printable characters, and must not contain any of the following characters: asterisk, percent sign, comma, single quotation mark, double quotation mark or any of the HL7 delimiters.</p> <p>Sequence: MRN~HCN</p> <p>Components: <code><ID (ST)> ^ <check digit (ST)> ^ <code identifying the check digit scheme employed (ID)> ^ < assigning authority (HD)> ^ <identifier type code (ID)> ^ < assigning facility (HD) ^ <effective date (DT)> ^ <expiration date (DT)></code> </p> <p>Examples:</p> <p>(1) MRN - Medical Record Number Example: 123456^^^4107^PI 'PI' stands for the Patient Institution. The WTIS will associate this PI code with the MRN Number. In this example, 4107 is the value used in MSH.4, indicating that the assigning authority of the MRN identifier is the sending facility/site. Note: Inclusion of PI code is mandatory when sending the MRN.</p> <p>(2) HCN - Health Card Number Example: 999999999^^^CANON^HC 'HC' stands for the Health Card Number. The WTIS will associate this HC code with the Health Card Number. In this example, CANON is the provincial assigning authority of the Health Card Number.</p> <p>Note: Inclusion of HC code is mandatory when sending HCN.</p> <p>The following are the accepted values for Health Card Assigning Authority (note: values based on HL7 v2.4): For any Assigning Authority values not found below, the Health Card number is not to be submitted to WTIS</p>

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes
						<p>AUSDVA – Australia – Dept. of Veterans Affairs AUSHIC – Australia – Health Insurance Commission CANAB - Alberta CANBC - British Columbia CANMB - Manitoba CANNB - New Brunswick CANNF - Newfoundland CANNNS - Nova Scotia CANNT - Northwest Territories CANNU- Nunavut CANON- Ontario CANPE - Prince Edward Island CANQC- Quebec CANSK - Saskatchewan CANYT - Yukon Territories NLVWS – NL Ministerie van Volksgezondheid USCDC – US Center for Disease Control USHCFA – US Healthcare Finance Authority USSSA – US Social Security Administration</p> <p><u>Example of sample message:</u> Both MRN and HCN are available: 123456^^^4107^PI ~999999999^^^CANON^HC</p> <p>Only MRN is available: 123456^^^4107^PI</p> <p>Note:</p> <ol style="list-style-type: none"> 1. The field length for MRN must be between 0 and 60. 2. The field length for HCN must be between 8 and 15 characters. 3. Either MRN or HCN should <i>not</i> include any embedded spaces.
5	Patient Name	250	R	M	XPN	<p>This is a mandatory field for ORM^O01 and ADT^A03</p> <p>All components must be alphanumeric. Family name and Given name must have at least one character.</p>

Seq #	HL7 Name	Max Length	HL7 Standard	WTIS	Data Type	WTIS Usage Notes

I.e. if the Most Appropriate Discharge Destination Determination Date is changed from the previously submitted value to a new value the Most Appropriate Discharge Destination must also change from the previously submitted value to a new value.</p> <p>Accepted Format: YYYYMMDD</p>

10.9 MSA (Message Acknowledgement Segment)

Seq #	HL7 Name	Max Length	HL7 Standard	Data Type	WTIS Usage Notes
0	Segment Name	3	R	ST	Value must be 'MSA'.
1	Acknowledgement Code	2	R	ID	Indication of success/failure of transaction (2) – valid values are "AA", "AE", "AR", receiving applications will set "AA" for successful completion and "AE" for application errors, "AR" is set by the infrastructure for invalid transactions or transactions that cannot make it through to the receiving application.
2	Message Control ID	20	R	ST	Message Control ID
3	Text Message	80	R	ST	Error Code (8) + English message text (72) – Format of error code is AMMMnnnZ where A is an application identifier, MMM is a module or sub-system identifier, nnn is a sequential number and Z is either "E" = error, "W" = warning, "I" = information

Seq #	HL7 Name	Max Length	HL7 Standard	Data Type	WTIS Usage Notes
4	Expected Sequence Number	15	O	NM	Expected Sequence Number
5	Delayed Acknowledgement Type	0	O	ID	Delayed Acknowledgement Type
6	Error Condition	250	O	CE	Error Condition

10.10 ERR (Error Segment)

Seq #	HL7 Name	Max Length	HL7 Standard	Data Type	WTIS Usage Notes
0	Segment Name	3	R	ST	Value must be 'ERR'. Optional, Repeats – minimum 0, maximum 10 ²
1	Error Code and Location	493	R	CM1	<ul style="list-style-type: none"> Segment Id (3) – optional; segment where error occurred. Sequence (4) – optional; occurrence of segment in transaction where error occurred. Field Position (4) – optional; field in segment where error occurred. Identifier of Code Identifying Error (8) – Message Number; required; reference table HNET:9000 for valid values; ERR segments are returned in “E”, “W”, “I” order. Text of Code Identifying Error (72) – Message Text; required. Alternate Identifier of Code identifying Error (15) – Alternate Message Number; optional; must be logged if present in transaction. Alternate Text of Code Identifying Error (256) – Alternate Message Text; optional; must be logged if present in transaction. Name of Alternate Coding System of Code Identifying Error (8) – optional; name of system that generated Alternate Identifier of Code Identifying Error.

Appendix A – ALC Scenarios for the WTIS

The following are detailed scenarios illustrating HL7 messages that are triggered based on ALC clinical events, including the resulting status of the ALC waitlist entry. These scenarios are only applicable to Complex ALC integration.

Consider the following scenario for an ALC waitlist entry:

On day 1, a patient is designated ALC and an ORM^O01 Open ALC Waitlist Entry message is sent.

- ALC waitlist entry status is **open**.

On day 15, the patient's ALC Discharge Destination (DD) and Most Appropriate Discharge Destination (MADD) are determined to be Long Term Care (LTC). An ORM^O01 Update ALC Waitlist Entry message is sent.

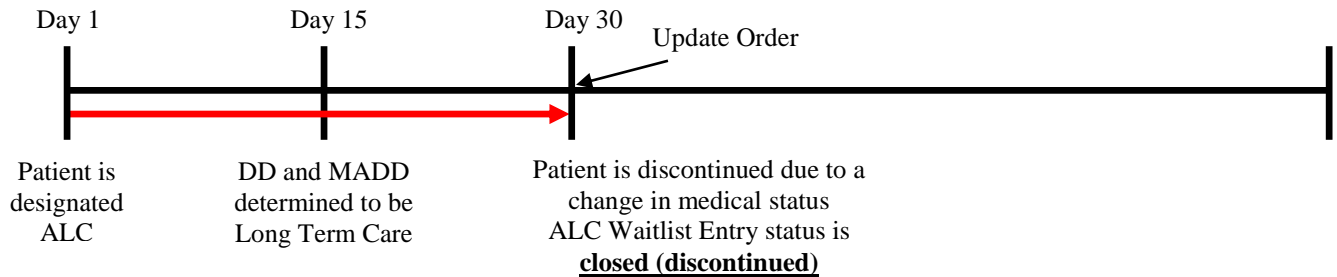

- ALC waitlist entry status is **open**.

Access to Care

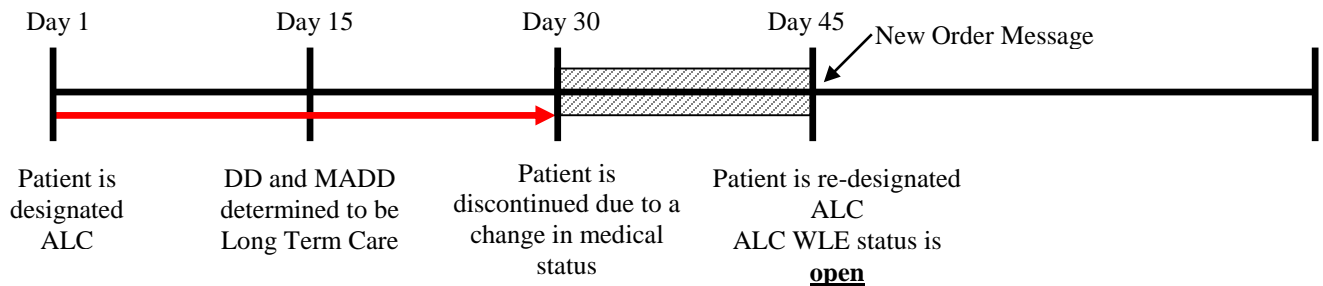

On day 30, the patient experiences a Change in Medical Status. An ORM^O01 Update ALC Waitlist Entry message is sent to discontinue the ALC waitlist entry.

- ALC waitlist entry status is closed (discontinued due to a change in medical status).

On day 45, the patient is re-designated ALC. An ORM^O01 Open ALC Waitlist Entry message is sent to re-designate the patient ALC, which re-opens the ALC waitlist entry.

- The time the patient was no longer ALC is referred to as an Acute Care Episode (ACE). The ACE is defined as the time between the ALC Discontinuation Date (Day 30) and the ALC Re-designation date (Day 45).
- ALC waitlist entry status is open and the DD and MADD are once again provided as Unknown

Access to Care

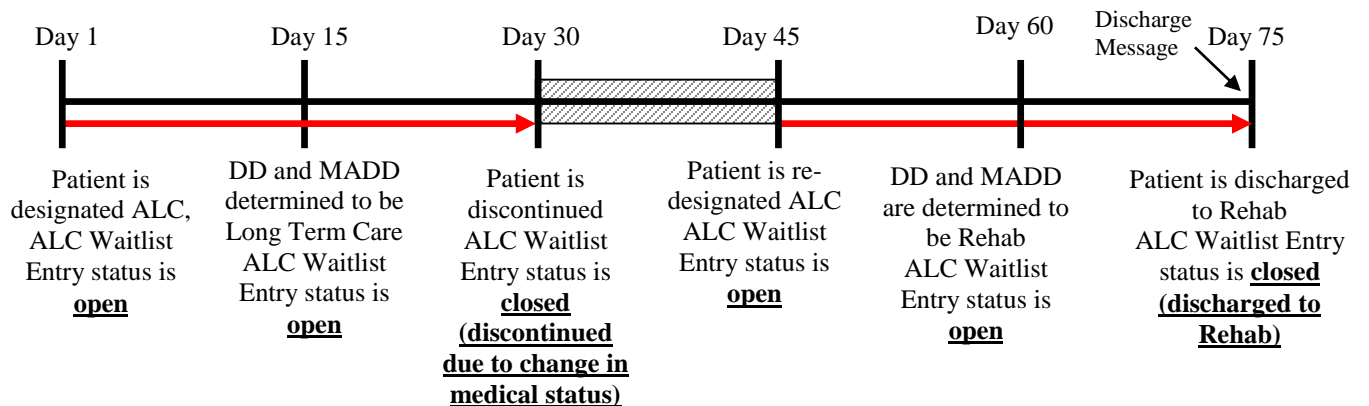

On day 60, the patient's DD and MADD are determined to be Rehab. An ORM^O01 Update ALC Waitlist Entry message is sent to update the ALC waitlist entry.

- ALC waitlist entry status is **open**.

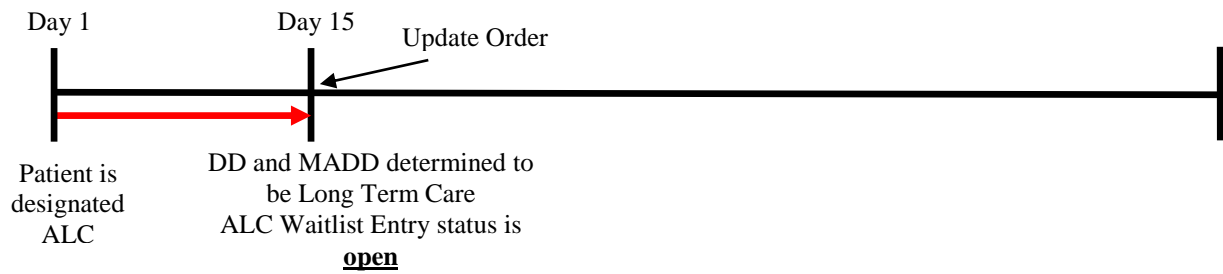

On day 75, the patient is sent to Rehab. An ADT^A03 Close ALC Waitlist Entry message is sent to close the ALC waitlist entry.

- ALC waitlist entry status is **closed (discharged to Rehab)**.

Alternate path for the previous scenario starting from day 15 (ALC waitlist entry status is open)

On day 30, the patient dies. An ADT^A03 Close ALC Waitlist Entry message is sent to close the ALC waitlist entry

- ALC waitlist entry status is **closed (discontinued due to patient death)**.

Appendix B – Revision Notes

Date	Version	Revision Description
09/30/2014	3.0	<p>Specifications updated with new and updated data elements for the 2014-15 expansion.</p> <ul style="list-style-type: none"> ▪ To allow site to site transfers, the following fields were added <ul style="list-style-type: none"> ○ New Site (PV1.37) ○ Transfer Date (PV1.45) ○ New Visit Number (PV1.50) ▪ A Most Appropriate Discharge Destination Determination Date (ZWA.9) has been added ▪ Both ALC Discharge Destination and Most Appropriate Discharge Destination have been made mandatory. ▪ A new code (UNK – Unknown) has been added to ALC Discharge Destination and Most Appropriate Discharge Destination. ▪ New Specialized Needs and Supports also added. <ul style="list-style-type: none"> ○ Behavioural Requirements - 1:1 Support ○ Behavioural Requirements - Aggressive Behaviours ○ Behavioural Requirements - Sexualized Behaviours ○ Infection Control/Isolation Requirements - Out-break at Discharge Destination ○ Infection Control/Isolation Requirements - Out-break at Facility ○ Mental Health Requirements - Addictions ○ Mental Health Requirements - Dual Diagnosis ○ Neurological Requirements - Acquired Brain Injury ○ Social Requirements - Financial constraints ○ Social Requirements - Housing/Homelessness ○ Social Requirements - Lack of social support ○ Social Requirements - Legal concerns ▪ Some Specialized Needs and Supports have had their names updated. Their coded values remain unchanged. <ul style="list-style-type: none"> ○ Behavioural Requirements changed to Behavioural Requirements - Unspecified ○ Infection Control/Isolation Requirements changed to Infection Control/Isolation Requirements - Infection Control – Isolation ○ Mental Health Requirements changed to Mental Health Requirements – Unspecified ○ Neurological Requirements changed to Neurological Requirements - Unspecified ○ Social Requirements changed to Social Requirements - Unspecified
